# LABORATORY OBSERVATION/RECORD

**Course:** Full Stack Web Development
**Course Code:** 23CM4121
**Experiment No.:** 1
**Student Name:** N. Samhavya
**Roll No.:** A24126552099
**Date:** 29-08-2026

---

# TASK 1 — HTML AND HTML5

## 1. TITLE

**Develop a College Information Portal Using HTML and HTML5 Features**

---

## 2. AIM

To understand and implement the fundamental building blocks of **HTML and HTML5** for creating a structured and interactive web page containing text, lists, tables, images, forms, semantic elements, multimedia, and HTML5 input types.

---

## 3. OBJECTIVE

The objectives of this task are:

- To understand the basic structure of an HTML5 document.
- To create web pages using headings and paragraphs.
- To apply different text-formatting tags. To create ordered and unordered lists.
- To add hyperlinks to external websites.
- To create and display student details using tables.
- To insert images with alternate text.
- To design a student registration form.
- To use HTML5 semantic elements.
- To embed audio and video files.
- To implement HTML5 input types such as email, date, number, color, and range. To understand the role of HTML in structuring web content.

---

# 4. THEORY

**HTML (HyperText Markup Language)** is the standard markup language used to create and structure web pages. HTML uses elements and tags to define different parts of a web page such as headings, paragraphs, lists, tables, forms, images, and links.

**HTML5** is the modern version of HTML that provides additional features such as semantic elements, multimedia support, canvas, and new form input types.

The basic structure of an HTML5 document consists of:

- <!DOCTYPE html> — Defines the document as an HTML5 document.
- <html> — Root element of the HTML document.
- <head> — Contains metadata and the page title.
- <body> — Contains the visible content of the web page.

### Important concepts used in this task:

**Headings and Paragraphs:**

<h1> to <h6> are used for headings, while <p> is used for paragraphs.

**Text Formatting:**

<b> makes text bold, <i> makes text italic, <u> underlines text, <sup> displays superscript text, and <sub> displays subscript text.

**Lists:**

<ul> creates an unordered list, while <ol> creates an ordered list. Individual items are created using <li>.

**Hyperlinks:**

The <a> tag is used to create links to other web pages or websites.

**Tables:**

<table>, <tr>, <th>, and <td> are used to create and organize tabular information.

**Images:**

The <img> tag is used to display images. The alt attribute provides alternative text if the image cannot be displayed.

**Forms:**

HTML forms collect user information using controls such as text boxes, radio buttons, checkboxes, dropdowns, textareas, and buttons.

**Semantic Elements:**

HTML5 provides meaningful elements such as <header>, <nav>, <section>, <article>, and <footer> to describe the structure of a web page.

**Multimedia:**

The <audio> and <video> elements allow audio and video files to be embedded directly into web pages.

**HTML5 Input Types:**

HTML5 provides specialized input types such as email, date, number, color, and range, which provide better input handling and browser-level validation.

---

# 5. ALGORITHM / PROCEDURE

1. Create a new HTML file.
2. Define the document as an HTML5 document using <!DOCTYPE html>.
3. Create the basic <html>, <head>, and <body> structure.
4. Add the title **College Information Portal**.

5. Add headings and paragraphs containing college information.
6. Apply bold, italic, underline, superscript, and subscript formatting.
7. Create an unordered list of available courses.
8. Create an ordered list containing the application procedure.
9. Add hyperlinks to the college website and Google.
10. Create a student details table containing Roll No, Name, Branch, and Email.
11. Insert the college logo and campus image using the <img> tag.
12. Add appropriate alternate text to the images.
13. Create a student registration form.
14. Add name, email, password, gender, hobbies, branch, comments, submit, and reset controls.
15. Add HTML5 semantic elements such as header, navigation, section, article, and footer.
16. Embed an audio file using the <audio> element.
17. Embed a video file using the <video> element.
18. Add HTML5 input types such as email, date, number, color, and range.
19. Save the HTML file.
20. Open the file in a web browser.
21. Verify all elements, links, images, form controls, audio, and video.
22. Record the output using screenshots.

---

# 6. PROGRAM

# 7. CODE EXPLANATION

| Code / Tag | Explanation |
|---|---|
| <!DOCTYPE html> | Declares the document as HTML5. |
| <html> | Defines the root element of the web page. |
| <head> | Contains metadata and page information. |
| <title> | Specifies the title displayed in the browser tab. |
| <h1>, <h2>, <h3> | Define different levels of headings. |
| <p> | Defines a paragraph. |
| <b> | Displays text in bold. |
| <i> | Displays text in italic. |
| <u> | Underlines text. |
| <sup> | Displays superscript text. |
| <sub> | Displays subscript text. |
| <ul> | Creates an unordered list. |
| <ol> | Creates an ordered list. |
| <li> | Defines an individual list item. |
| <a> | Creates a hyperlink. |
| <table> | Creates a table. |
| <tr> | Defines a table row. |
| <th> | Defines a table heading. |
| <td> | Defines table data. |
| <img> | Displays an image. |
| alt | Provides alternative text for an image. |
| <form> | Creates an HTML form. |

| | |
|---|---|
| <input> | Creates different types of input controls. |
| <select> | Creates a dropdown list. |
| <textarea> | Creates a multi-line text input area. |
| <header> | Defines the header section of a page. |
| <nav> | Defines navigation links. |
| <section> | Defines a section of content. |
| <article> | Defines independent or self-contained content. |
| <footer> | Defines the footer section. |
| <audio> | Embeds an audio file. |
| <video> | Embeds a video file. |
| target="_blank" | Opens the linked page in a new browser tab. |

---

# 8. TEST CASES AND EXECUTION DATA

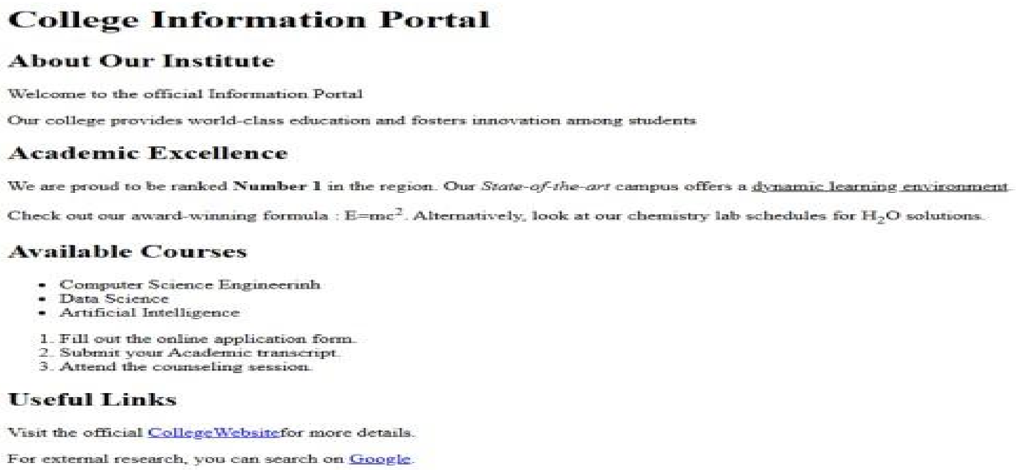
The following test cases can be recorded after executing the webpage in a browser.

| Test Case | TC-01 |
|---|---|
| **Test / Input** | Load the College Information Portal webpage in the browser |
| **Expected Result** | The webpage should display the college information, available courses, useful links, student details, college logo, campus image, registration form, media elements, and footer correctly. |
| **Actual Result** | All the webpage sections and elements were displayed correctly. |
| **Status** | **Pass** |

**TC-01 Output:**

| Test Case | TC-02 |
|---|---|
| **Test / Input** | Check the College Information Portal content and headings |
| **Expected Result** | The headings such as College Information Portal, About Our Institute, Academic Excellence, Available Courses, and Useful Links should be displayed correctly. |
| **Actual Result** | All headings and corresponding information were displayed correctly. |
| **Status** | **Pass** |

**TC-02 Output:**



# College Information Portal

## About Our Institute

Welcome to the official Information Portal

Our college provides world-class education and fosters innovation among students

## Academic Excellence

We are proud to be ranked **Number 1** in the region. Our *State-of-the-art* campus offers a dynamic learning environment.

Check out our award-winning formula : $E=mc^2$. Alternatively, look at our chemistry lab schedules for $H_2O$ solutions.

## Available Courses

- Computer Science Engineerinh
- Data Science
- Artificial Intelligence

1. Fill out the online application form.
2. Submit your Academic transcript.
3. Attend the counseling session.

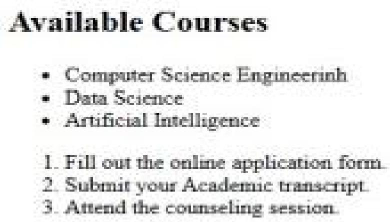
## Useful Links

Visit the official CollegeWebsitefor more details.

For external research, you can search on Google.

| Test Case | TC-03 |
|---|---|
| **Test / Input** | Check the Available Courses list |
| **Expected Result** | The courses Computer Science Engineering, Data Science, and Artificial Intelligence should be displayed as a list. |
| **Actual Result** | All three courses were displayed correctly. |
| **Status** | **Pass** |

**TC-03 Output:**



## Available Courses

- Computer Science Engineerinh
- Data Science
- Artificial Intelligence

1. Fill out the online application form.
2. Submit your Academic transcript.
3. Attend the counseling session.

| Test Case | TC-04 |
|---|---|
| **Test / Input** | Check the Useful Links section |
| **Expected Result** | The College Website and Google links should be displayed and available for navigation. |
| **Actual Result** | Both links were displayed correctly. |
| **Status** | **Pass** |

**TC-04 Output:**

## Useful Links

Visit the official CollegeWebsitefor more details.

For external research, you can search on Google.

| Test Case | TC-05 |
|---|---|
| **Test / Input** | Check the Student Details table |
| **Expected Result** | The table should display Roll No, Name, Branch, and Email details for the students. |
| **Actual Result** | The Student Details table was displayed correctly with the required columns and student information. |
| **Status** | **Pass** |

**TC-05 Output:**

**Student Details**

| Roll No | Name | Branch | Email |
|---|---|---|---|
| 100 | Raj | CSE | raj@gmail.com |
| 101 | Priya | CSM | priya@gmail.com |

| Test Case | TC-06 |
|---|---|
| **Test / Input** | Check the College Logo and Campus Image |
| **Expected Result** | The college logo and campus image should be displayed correctly on the webpage. |
| **Actual Result** | Both images were rendered correctly. |
| **Status** | **Pass** |

**TC-06 Output:**

**College Logo**

ANITS

**Campus Image**

| Test Case | TC-08 |
|---|---|
| **Test / Input** | Check the Audio and Video elements |
| **Expected Result** | The webpage should display functional audio and video media controls. |
| **Actual Result** | Both audio and video elements were displayed correctly with media controls. |
| **Status** | **Pass** |

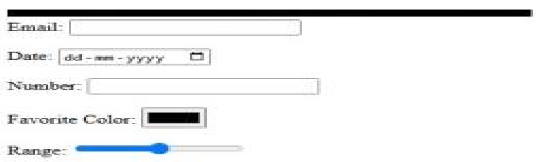
**TC-08 Output:**

**Audio**

**Video**

| Test Case | TC-09 |
|---|---|
| **Test / Input** | Check the additional input controls |
| **Expected Result** | Email, Date, Number, Favorite Color, and Range input controls should be displayed correctly. |
| **Actual Result** | All additional input controls were displayed correctly. |
| **Status** | **Pass** |

**TC-09 Output:**



| Test Case | TC-10 |
|---|---|
| **Test / Input** | Check the Submit and Reset buttons in the registration form |
| **Expected Result** | Submit and Reset buttons should be displayed and available for form interaction. |
| **Actual Result** | Both Submit and Reset buttons were displayed correctly. |
| **Status** | **Pass** |

**TC-10 Output:**

# 9. OUTPUT

## Output 1: College Information Portal

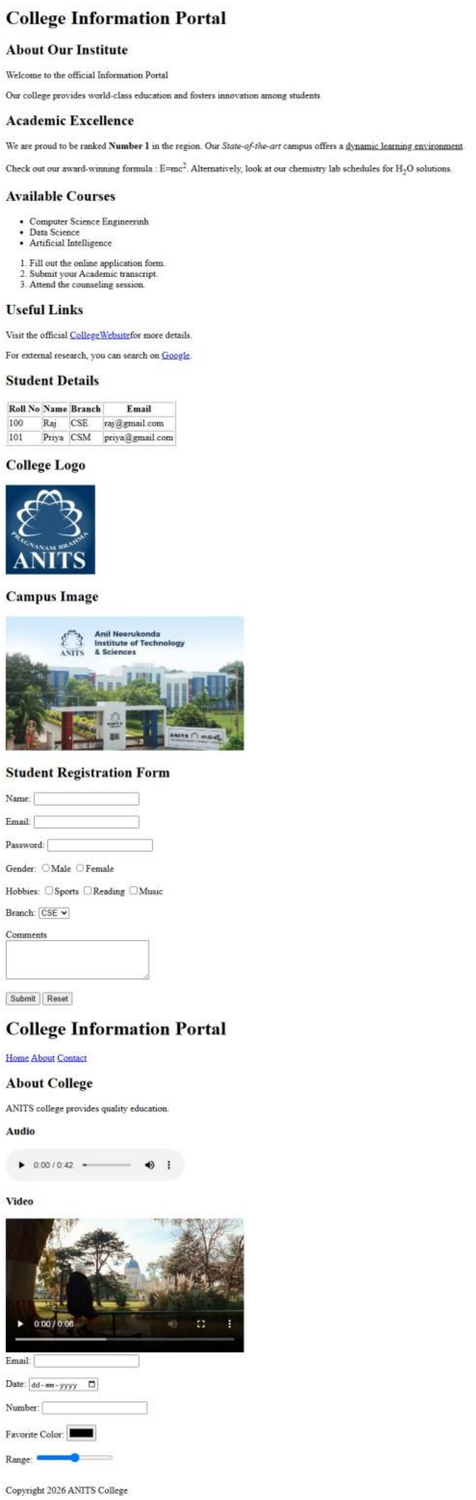


*Figure 1: Output of the College Information Portal webpage showing headings, paragraphs, formatting, lists, hyperlinks, table, images, and form.*

## Supporting Files Used

The following files are used with the HTML page:

- logo.jpg — College logo
- campus.jpg — Campus image
- audio.mp3 — Audio file
- video.mp4 — Video file  logo.jpg

campus.jpg

---

# 10. INTERVIEW QUESTIONS

### Q1. What is the purpose of semantic HTML5 elements?

**Answer:**

Semantic HTML5 elements provide meaningful information about the structure and purpose of different sections of a web page. Elements such as <header>, <nav>, <section>, <article>, and <footer> make the HTML code easier to understand, maintain, and interpret by browsers, search engines, and assistive technologies.

### Q2. Compare Ordered and Unordered Lists.

**Answer:**

An **ordered list (<ol>)** displays items in a specific sequence, usually using numbers or letters. An **unordered list (<ul>)** displays items without indicating a particular order, usually using bullet points.

### Q3. What happens if an image path is incorrect?

**Answer:**

If the image path is incorrect, the browser cannot find and display the image. Instead, the image will appear as broken or missing. The alternative text specified using the `alt` attribute may be displayed.

### Q4. Differentiate Radio Buttons and Checkboxes.

**Answer:**

Radio buttons are generally used when the user must select **one option from a group of options**. Checkboxes are used when the user can select **multiple independent options**.

### Q5. Explain the advantages of HTML5 input types over traditional text boxes.

**Answer:**

HTML5 input types provide specialized controls and built-in validation. For example, email validates email-format input, date provides a date selector, number supports numeric values, color provides a color picker, and range provides a slider. They improve usability and reduce the need for additional validation code.

---

# 11. RESULT

Thus, a **College Information Portal** was successfully developed using **HTML and HTML5**. Basic HTML elements, text formatting, lists, hyperlinks, tables, images, forms, semantic elements, multimedia, and HTML5 input types were implemented and verified successfully.

# TASK 2 — HTML5 CANVAS AND CSS STYLING

## 1. TITLE

**Implement HTML5 Canvas Graphics and Design a Styled Web Page Using CSS**

---

## 2. AIM

To understand and implement **HTML5 Canvas** for drawing basic graphical elements and **CSS** for styling and designing a structured web page.

---

## 3. OBJECTIVE

The objectives of this task are:

- To understand the HTML5 `<canvas>` element.

- To obtain the 2D drawing context using JavaScript.
- To draw basic shapes using Canvas.
- To draw a rectangle, circle, and line.
- To display text using Canvas.
- To understand external CSS styling.
- To apply fonts, colors, spacing, borders, and shadows.
- To create a navigation bar using CSS.
- To design card-based content using Flexbox.
- To apply hover effects to links and buttons.
- To create a visually styled web page.

---

# 4. THEORY

### HTML5 Canvas

The **HTML5 Canvas** element provides a drawing area that can be controlled using JavaScript. It can be used to create graphics, shapes, text, animations, and other visual elements.

The <canvas> element defines the drawing area, while JavaScript is used to perform the actual drawing.

The getContext("2d") method obtains the **2D drawing context**, which provides methods for drawing shapes and text.

In this task:

- fillRect() is used to draw a rectangle.
- arc() is used to create a circular path.
- stroke() is used to draw the line.
- fillText() is used to display text.
- fillStyle is used to set the fill color.
- font is used to define the text font.

### CSS

**CSS (Cascading Style Sheets)** is used to control the appearance and layout of HTML elements.

External CSS can be connected to an HTML page using the <link> element. In this task, CSS is used for:

- Font styling
- Background gradient
- Text color
- Navigation styling
- Flexbox layout
- Cards
- Borders
- Rounded corners
- Box shadows
- Button styling

- Hover effects
- Footer styling

---

# 5. ALGORITHM / PROCEDURE

### Part A — Canvas

1. Create an HTML5 document.
2. Add a <canvas> element with a width of 500 pixels and height of 300 pixels.
3. Assign an ID to the canvas.
4. Use JavaScript to access the canvas element.
5. Obtain the 2D drawing context using getContext("2d").
6. Set the fill color for the rectangle.
7. Draw a rectangle using fillRect().
8. Create a circular path using arc().
9. Fill the circle using fill().
10. Create a line using moveTo() and lineTo().
11. Draw the line using stroke().
12. Set the font and text color.
13. Display text using fillText().
14. Open the HTML file in a browser and verify the output.

### Part B — CSS Styled Web Page

1. Create an HTML5 document.
2. Add a heading inside the header.
3. Create a navigation bar containing Home, About, Services, and Contact links.
4. Create a container for the content cards.
5. Add separate cards for HTML, CSS, and JavaScript.
6. Add headings, descriptions, and buttons to each card.
7. Create a footer.
8. Create an external style.css file.
9. Link the CSS file to the HTML document.
10. Apply a gradient background to the page.
11. Style the header and navigation links.
12. Use Flexbox to arrange the cards.
13. Apply borders, rounded corners, and shadows to the cards.
14. Style the buttons.
15. Add hover effects to navigation links and buttons.
16. Open the HTML file in a browser.
17. Verify the final styled webpage.

---

# 6. PROGRAM

## Part A — HTML5 Canvas

### Task2_PastA.html

```
<!DOCTYPE html>

---

# 7. CODE EXPLANATION

## Part A — Canvas

| Code | Explanation |
|---|---|
| <canvas> | Creates a drawing area on the web page. |
| id="myCanvas" | Provides an identifier for accessing the canvas using JavaScript. |
| width="500" | Sets the canvas width to 500 pixels. |
| height="300" | Sets the canvas height to 300 pixels. |
| getElementById() | Retrieves the canvas element from the HTML document. |
| getContext("2d") | Obtains the 2D drawing context. |
| fillStyle | Specifies the fill color of graphical elements. |
| fillRect() | Draws and fills a rectangle. |
| beginPath() | Starts a new drawing path. |
| arc() | Creates an arc or circular path. |
| fill() | Fills the current path. |
| moveTo() | Sets the starting point of a line. |
| lineTo() | Specifies the ending point of a line. |
| stroke() | Draws the current path. |
| font | Specifies the font and size of text. |
| fillText() | Displays text on the canvas. |

---

## Part B — HTML and CSS

| Code | Explanation |
|---|---|

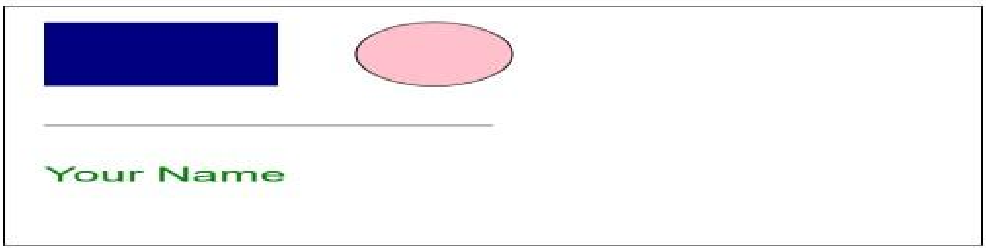
| | |
|---|---|
| <link rel="stylesheet"> | Connects the external CSS file to the HTML page. |
| <header> | Defines the header section. |
| <nav> | Defines the navigation section. |
| .container | Defines the main container for the cards. |
| display: flex | Creates a flexible layout for arranging elements. |
| justify-content: spacearound | Distributes the cards with space around them. |
| .card | Defines the appearance of individual content cards. |
| background | Sets the background color or gradient. |
| border | Adds a border around an element. |
| border-radius | Creates rounded corners. |
| box-shadow | Adds a shadow around an element. |
| text-shadow | Adds a shadow effect to text. |
| :hover | Applies styles when the mouse pointer moves over an element. |
| padding | Adds space inside an element. |
| margin | Adds space outside an element. |
| footer | Defines the footer section of the page. |

# 8. TEST CASES AND EXECUTION DATA

## Part A — Canvas Test Cases

| **Test Case** | **TC-01** |
|---|---|
| **Test / Input** | Load the webpage containing the graphical elements |
| **Expected Result** | The webpage should display a blue rectangle, pink circle, horizontal line, and "Your Name" text correctly. |
| **Actual Result** | All graphical elements and text were displayed correctly. |
| **Status** | **Pass** |

**TC-01 Output:**



## Part B — CSS Styled Web Page Output

| **Test Case** | **TC-02** |
|---|---|
| **Test / Input** | Load the styled web page in the browser |

| | |
|---|---|
| **Expected Result** | The webpage should display the "My Styled Web Page" heading, navigation links, three content cards, and copyright text. |
| **Actual Result** | The complete styled webpage was displayed correctly. |
| **Status** | **Pass** |

|---|---|
| **Test / Input** | Check the HTML, CSS, and JavaScript content cards |
| **Expected Result** | Three cards labeled HTML, CSS, and JavaScript should be displayed with their respective descriptions. |
| **Actual Result** | All three cards and their descriptions were displayed correctly. |
| **Status** | **Pass** |

**TC-04 Output:**

| **Test Case** | **TC-05** |
|---|---|
| **Test / Input** | Check the copyright information |
| **Expected Result** | Copyright information should be displayed below the content cards. |

| | |
|---|---|
| **Actual Result** | "Copyright 2026" was displayed correctly. |
| **Status** | **Pass** |

**TC-05 Output:**

# 9. OUTPUT

## Part A — HTML5 Canvas Output

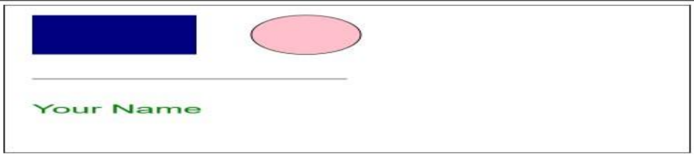

*Figure 1: HTML5 Canvas output showing a rectangle, circle, line, and text.*

## Part B — CSS Styled Web Page Output

*Figure 2: Styled web page showing header, navigation bar, HTML/CSS/JavaScript cards, buttons, and footer.*

# 10. RESULT

Thus, **HTML5 Canvas graphics** were successfully implemented using JavaScript to draw a rectangle, circle, line, and text. A **styled web page** was also successfully developed using external CSS, including Flexbox layout, navigation styling, cards, borders, shadows, gradients, buttons, and hover effects. The outputs were verified successfully.
